

Analog Clock

Prepare:

To safely assemble the clock, place a folded up towel on the table. Then, place the clock over it, and poke a hole in the center with a sharp pencil. The pencil will create a hole for the brad, without hurting your hand or anything else. The same process needs to be used to create holes in each hand of the clock.

Cut out the clock face and the clock hands. Attach the clock hands to the center of the clock face by pushing a brad through the holes created using the pencil.

For best results and extra durability, print on cardstock or laminate, then poke holes in the arrows for brads **BEFORE** you cut out the arrows.

Tip!
